Hi Manny, Thanks for reaching out! There are types of stainless steel that are not as resistant to chlorine corrosion as others. Those in the 300 series of alloys that are austenitic stainless are good options, and the molybdenum content of 316 makes it more resistant.

UGSI Chemical Feed includes the Polyblend ® mechanical polymer feeders and the Dynablend ™ and Dynajet ™ hydraulic polymer feeders. Our designs feature two-stage mixing with high energy for the optimum initial wetting followed by a quiescent zone allowing for more gentle activation, as polymer science dictates.

Polymer solar cells are reviewed in the context of the processing techniques leading to complete devices. A distinction is made between the film-forming techniques that are used currently such as spincoating, doctor blading and casting and the, from a processing point of view, more desirable film-forming techniques such as slot-die coating, gravure coating, knife-over-edge coating, off-set ...

As the performance in terms of power conversion efficiency and operational stability for polymer and organic solar cells is rapidly approaching the key 10–10 targets (10 % efficiency and 10 years of stability) the quest for efficient, scalable, and rational processing methods has begun.
